

MY REFLECTION IN EUP1501 MODULE

According to my experience in this module, I have learnt computer literacy. I have obtained skills of computer literacy from external assignments. Those assignments have Microsoft Word, Microsoft Power Point, Microsoft Edge, and Microsoft Excel. In the Microsoft word, I have learnt to type, changing the font size, font family, font color and font style, changing the line space, and line indent. Therefor I carried on learning other thing that I did not know from Microsoft word. So I can use that knowledge to help some people who need it at my community and at home.

As for Microsoft Power Point, I have learnt to make a presentation. I found it very simple because we use slides only. In those slides we type in important points. I can also use it to help those who need help at my community and at home. As for Microsoft Excel, I have learnt to use formulas to make calculation and others. It mostly used to store data. I like this module because I have learnt many things that I did not know.

I have learnt many things in a very short time. Since I am originally from rural area, I came here without any knowledge of internet usage. So EUP1501 is an online module, meaning you do everything online. So it was difficult for me to do assignments online. I did not have internet background like I have already mentioned. I tried to get any information about this module from former students, but unfortunately they refused to help me. So I met with other students who were in the same situation as I was. We had the same problem in this module. So we came up with a solution to the problem we were facing. We started a group. We were meeting three times a week, discussing this module.

The most important thing that this module has helped me with is using internet to get information. I have learnt to conduct a research about a particular topic. I have obtained this skills from discussion assignments, because they each had a different topic. Therefore I had to conduct a research in order to get information. So now I can conduct my own research about any thing I want, I can also help my siblings to conduct a research. This has helped me to get skills in using Internet. The topics we were conducting researches include Understanding development Bridging the Digital divide. The information that I have gathered about this topic has taught me that a digital divide is the gulf between those who have ready access to computers and the Internet, and those who do not. For instance, schools at rural areas and urban areas are very different. Schools in rural areas do not have access to the internet and computers whilst school at urban areas have access to the internet and computers.
